50 CLAUDE CODE TIPS

TESTED

What Actually Moves the Needle

We tested all 50 against a 10/10 AI-Native architecture. Here's what survived.

@MamounAlamouri

THE REALITY CHECK

NO
You don't need all 50 tips
Most are shortcuts. Ignore them.

NO
You don't need to memorize
Structure beats memory.

NO
You don't need experimental features
Stick to the stable core.

WHAT YOU NEED

- A clean CLAUDE.md (150 lines max)
- 4 hooks (auto-format, destructive blocker, compaction, commit enforcer)
- 3 custom agents (reviewer, tester, PR creator)
- Conditional rules for sensitive files

THE ENFORCEMENT PYRAMID

Not all instructions are equal. Some are suggestions. Some are law.

HOOKS	100% — deterministic, always runs
GIT HOOKS	100% — catches at commit time
CONDITIONAL RULES	100% when triggered
CLAUDE.md	~80% compliance

1 BUILD YOUR FOUNDATION

Skills System

51 skills in 6 categories. Load on demand. Keeps context lean.

CLAUDE.md Discipline

150–200 instruction budget. Litmus test every line. Cut /init output in half.

Conditional Rules

.claude/rules/ with path frontmatter. Only load when relevant.

PRO TIP

If you can't explain why a line is in CLAUDE.md, delete it.

2

HOOKS: 100% ENFORCEMENT

Auto-Formatter

Prettier on every JS/TS edit

Destructive Blocker

Blocks rm -rf, force push, DROP TABLE

Compaction Restorer

Re-injects branch, directory, skills

Commit Enforcer

Conventional commits or reject

3 WHAT HUMANS STILL OWN

Triple Enforcement for Auth/Payments

- CLAUDE.md SOP (mandatory)
- Conditional rule (loads automatically)
- Destructive hook (blocks dangerous ops)

Write-Review Pattern

- One Claude writes feature
- Fresh Claude reviews from clean context
- Custom code-reviewer agent
- Outputs MERGE/REVISE/BLOCK

PRO TIP

Auth, payments, data mutations. Always human eyes. No exceptions.

4 PARALLEL EXECUTION

Worktrees
Isolated branches. 3–5 parallel sessions.

Subagents
Deep investigation without consuming main context.

Agent Teams
Experimental. Powerful for non-critical parallel work.

Fan-out (-p)
Batch operations across repos.

5 SESSION HYGIENE

ultrathink	For architecture decisions
Plan Mode	For multi-file changes
/clear	Between unrelated tasks
Compaction directives	Focus on what matters
@ references	Skip search, reference directly

6

YOUR TOOLBELT

gh CLI

All GitHub ops. More context-efficient than MCP.

MCP Stack

Playwright, Supabase, GHL, n8n, HeyReach, Instantly, Apify

Self-check

Run tests after code changes. Catches 80% of bugs.

/loop

Recurring checks on interval. Monitor long-running tasks.

7

BUILD YOUR AGENT TEAM

code-reviewer

Senior engineer review

Verdict:

MERGE/REVISE/BLOCK

test-runner

Run tests, fix failures

Verdict:

PASS/FAIL with fixes

pr-creator

PR with risk assessment

Verdict:

Ready/Risk detected

Use /branch when you want to try something risky without losing your work.

WHAT'S COMING NEXT

LSP Plugin

Type errors, unused imports, auto-fix after every edit

@imports

Reference docs without bloating CLAUDE.md

Claude interviews you

Generates complete specs from your answers

Conversational PR review

Walk Claude through changes, drill into risky sections

THE SCORECARD

25	11	14
Battle-Tested	Queued	Skipped

4
Production hooks

3
Custom agents
